SUMMARY

Senior Software Engineer with 10+ years of software development experience and a strong focus on frontend engineering, responsive web applications, performance optimization, and scalable web platforms. Experienced with React, TypeScript, JavaScript, Next.js, Vue.js, Angular, TailwindCSS, APIs, cloud infrastructure, CI/CD, AI automation, and modern frontend development practices.

Experienced in building polished, interactive user experiences while maintaining technical quality, performance, reliability, and maintainability. Strong collaborator who works across engineering, product, design, and business teams, with experience building reusable frontend systems, automating workflows, integrating AI capabilities, and improving the development experience for technical and non-technical stakeholders.

EDUCATION

MICHIGAN TECHNOLOGICAL UNIVERSITY

BACHELOR DEGREE IN COMPUTER SCIENCE

JUN 2010 – JUN 2014

EXPERIENCE

SENIOR SOFTWARE ENGINEER, MARKETING

AUG 2024 – JAN 2026

OneStream Software

Hybrid

Led frontend engineering and web platform initiatives while remaining hands-on with application architecture, interactive user experiences, infrastructure, automation, and production delivery.

- Built and continuously improved responsive, interactive web applications using React, TypeScript, Next.js, TailwindCSS, JavaScript, HTML5, and CSS3, emphasizing polished user experiences, maintainability, accessibility, and performance.
- Designed reusable frontend components and shared UI infrastructure that improved consistency across application experiences and reduced duplicated implementation across product areas.
- Optimized frontend performance through rendering improvements, state management, API optimization, component reuse, and scalable frontend architecture.
- Developed and integrated REST APIs, GraphQL services, authentication systems, analytics services, and third-party integrations supporting reliable data flows between frontend applications and backend platforms.
- Built cloud-based infrastructure and deployment workflows using AWS, Docker, Kubernetes, Terraform, and CI/CD pipelines, improving deployment reliability and supporting scalable production environments.
- Integrated AI-powered features and Large Language Model services into enterprise platforms for intelligent search, workflow automation, analytics, and productivity improvements.
- Identified repetitive engineering workflows and implemented automation and reusable tooling to help teams ship functionality more efficiently.
- Worked closely with product, design, engineering, and business stakeholders to translate requirements into polished, reliable, user-centered digital experiences.
- Investigated production performance, integration, and reliability issues and implemented fixes that improved application stability and user experience.

SENIOR FRONTEND ENGINEER

OCT 2022 – JUN 2024

OneStream Software

Remote

Focused on frontend application development, reusable web infrastructure, performance optimization, API integration, and data-driven user experiences.

- Developed responsive and interactive web applications using React, Angular, TypeScript, JavaScript, TailwindCSS, HTML5, and CSS3 for enterprise and customer-facing workflows.

- Built reusable frontend component libraries and shared UI patterns that improved consistency, maintainability, and development velocity across multiple product areas.
- Created data visualization interfaces using D3.js, presenting complex information through accessible and highly interactive web experiences.
- Optimized frontend performance through component optimization, state management improvements, API efficiency, rendering optimization, and scalable application architecture.
- Integrated REST APIs, GraphQL, WebSocket services, authentication platforms, CRM systems, payment providers, and analytics services into production applications.
- Developed tracking-ready application workflows and data integrations supporting analytics, reporting, operational measurement, and customer-facing experiences.
- Collaborated closely with product managers, designers, backend engineers, and other stakeholders to turn requirements and designs into reliable production features.
- Participated in code reviews, debugging, technical planning, testing, and continuous improvement of frontend development workflows.

FULLSTACK SOFTWARE ENGINEER

FEB 2020 – SEP 2022

Bluemercury

Remote

Built SaaS and web platforms with an emphasis on frontend experience, workflow automation, integrations, performance, and cloud-based infrastructure.

- Developed responsive web applications using React, Vue.js, TypeScript, JavaScript, TailwindCSS, HTML5, and CSS3 for enterprise customers across multiple industries.
- Created customer-facing workflows, dashboards, reusable components, and interactive interfaces designed around usability, maintainability, and efficient user interactions.
- Developed REST APIs and backend services using Python, Django, Node.js, Express.js, and Laravel to support reliable frontend integrations.
- Implemented workflow automation, background processing, messaging systems, and real-time operational dashboards using WebSocket and event-driven technologies.
- Integrated machine learning, NLP, recommendation systems, and AI automation into customer-facing applications, expanding platform functionality and reducing manual workflow requirements.
- Deployed applications using Docker, Kubernetes, AWS, and Azure while maintaining CI/CD automation, monitoring, reliability, and scalable cloud infrastructure.
- Improved development efficiency by creating reusable components, automated workflows, and standardized implementation patterns that reduced repeated engineering effort.

SOFTWARE ENGINEER

MAR 2018 – JAN 2020

Com-Plex Systems Ltd

Hybrid

Developed and maintained enterprise web applications while taking ownership of frontend modules, APIs, integrations, and production improvements.

- Developed responsive web interfaces and reusable UI components using JavaScript, frontend frameworks, HTML5, CSS3, and PHP/Laravel.
- Built administrative dashboards, reporting interfaces, and customer-facing workflows with emphasis on usability, performance, and maintainability.
- Designed and integrated REST APIs, authentication systems, database-driven applications, and third-party service integrations.
- Participated in application optimization, debugging, refactoring, and production maintenance, improving stability and long-term code quality.
- Worked closely with product and engineering teams to understand business requirements and deliver reliable software features within agile development cycles.
- Supported cross-functional problem solving by communicating technical issues, implementation options, and practical solutions to engineering and product stakeholders.

SOFTWARE DEVELOPER INTERN

SEP 2016 – JAN 2018

Lakeside Software

On-Site

Supported frontend development and web application maintenance while gaining practical experience with responsive interfaces, APIs, testing, and collaborative software development.

- Assisted in building responsive and mobile-friendly web applications using JavaScript, React, HTML5, and CSS3.
- Supported REST API integrations, authentication workflows, database queries, HTTP requests, and frontend-backend communication.
- Assisted with debugging, testing, bug reproduction, and application stability improvements across frontend and backend services.
- Contributed to responsive layouts, cross-browser compatibility, UI consistency, and improved web experiences across desktop and mobile devices.
- Worked within agile engineering teams and participated in code reviews, technical discussions, testing, and production application maintenance.

TECHNICAL SKILLS

FRONTEND & WEB DEVELOPMENT: React, TypeScript, JavaScript, Next.js, Vue.js, Angular, TailwindCSS, HTML5, CSS3, Responsive Web Applications, Interactive Web Applications, Frontend Architecture, Component Libraries, Design Systems, Web Performance, Accessibility

MARKETING & WEB PLATFORM: Marketing Website Development, Website Optimization, Conversion-Focused Development, Technical SEO, Search Engine Optimization, AI Agents, Page Speed, Web Hosting, Website Infrastructure, Content Management Systems, Website Integrations, Attribution, Conversion Events, Funnel Data, Experimentation

ANALYTICS & MEASUREMENT: Analytics, Measurement, Cookies, Conversion Events, Tracking, Attribution, Funnel Data, Technical Metrics, Performance Metrics, User Experience Metrics, Data Visualization, D3.js

AUTOMATION & AI: AI, AI Agents, AI-Driven Automation, AI-Assisted Development, Large Language Models (LLM), OpenAI APIs, LLM Coding Tools, Workflow Automation, Developer Productivity, Automated Workflows

INFRASTRUCTURE & DEPLOYMENT: AWS, Azure, Google Cloud Platform (GCP), Docker, Kubernetes, Terraform, CI/CD Pipelines, GitHub Actions, Cloud-Based Environments, Web Hosting, Deployment Automation, Monitoring

BACKEND & INTEGRATIONS: REST APIs, GraphQL, Node.js, Express.js, NestJS, Python, FastAPI, Django, Django Rest Framework, Java/Spring Boot, PHP/Laravel, WebSocket, Third-Party Integrations

TOOLS & COLLABORATION: Git, GitHub, Jira, Linear, VS Code, Postman, Figma, Agile/Scrum, Cross-Functional Collaboration, Technical Communication, Marketing Collaboration, Design Collaboration
