SUMMARY

Software Engineer with 10+ years of experience designing, developing, and maintaining production web applications across SaaS, enterprise, fintech, e-commerce, and AI-powered platforms. Strong experience with React, TypeScript, Node.js, Python, HTML, CSS, JavaScript, and modern web application development, with a focus on building reliable systems that solve real user problems.

Experienced across the full software development lifecycle, from conception and implementation through maintenance, performance optimization, and reliability improvements. Strong problem-solving, collaboration, communication, and cross-functional teamwork skills, with practical experience connecting user interfaces to backend systems, databases, APIs, and AI-assisted development workflows.

EDUCATION

MICHIGAN TECHNOLOGICAL UNIVERSITY

BACHELOR DEGREE IN COMPUTER SCIENCE

JUN 2010 – JUN 2014

EXPERIENCE

SOFTWARE ENGINEER — WEB APPLICATIONS

AUG 2024 – JAN 2026

OneStream Software (Hybrid)

I combined hands-on software engineering with system design and cross-functional collaboration to build reliable, scalable web applications and improve existing product experiences.

- Built and maintained production web applications using React, TypeScript, Node.js, Python, HTML, CSS, and modern frontend architectures for complex enterprise workflows.
- Worked with product and engineering teams to plan, shape, implement, and maintain features throughout the full software development lifecycle.
- Improved application performance and reliability through frontend optimization, backend improvements, database optimization, and structured debugging, reducing recurring performance issues by approximately 25%.
- Developed reusable frontend components and shared UI patterns that improved consistency and reduced duplicated implementation work by approximately 30%.
- Built backend systems and APIs using Node.js, Express.js, NestJS, Java/Spring Boot, and Python/FastAPI, connecting user interfaces with data models and external services.
- Integrated AI-powered capabilities and Large Language Models (LLM) into enterprise applications for intelligent automation, conversational search, analytics, and workflow optimization.
- Used AI Tools and AI-Assisted Development approaches to accelerate development, investigate technical problems, prototype solutions, and improve engineering productivity.
- Collaborated cross-functionally with engineering, product, design, and AI teams to solve complex problems and deliver production-ready solutions.

FULL STACK SOFTWARE ENGINEER

OCT 2022 – JUN 2024

OneStream Software (Remote)

I focused on building modern web applications and backend systems while working closely with cross-functional teams to deliver reliable features and improve user-facing workflows.

- Developed production web applications using React, TypeScript, Angular, Node.js, Java/Spring Boot, HTML, CSS, and JavaScript for financial and enterprise workflows.
- Built and maintained quality user interfaces for large audiences, focusing on usability, responsive behavior, performance, and maintainability.
- Developed REST APIs, GraphQL services, WebSocket systems, and event-driven architectures connecting frontend applications with backend systems and data models.

- Designed database systems using Postgres, PostgreSQL, MySQL, MongoDB, and Redis, optimizing indexing, queries, and data access for large-scale applications.
- Built reusable frontend components and data visualization systems using React, TypeScript, Redux, and D3.js, improving development consistency and reducing repeated UI implementation.
- Worked with cross-functional teams to decompose complex technical problems, evaluate solutions, and deliver features within Agile/Scrum development environments.
- Integrated third-party APIs, authentication systems, analytics platforms, payment providers, and enterprise services while maintaining application reliability and security.

FULL STACK SOFTWARE ENGINEER — WEB PLATFORMS

FEB 2020 – SEP 2022

Bluemercury (Remote)

I developed SaaS platforms and business applications combining modern web technologies, backend systems, databases, and AI capabilities.

- Built SaaS web applications using React, Vue.js, JavaScript, HTML, CSS, Laravel, and Python, delivering responsive interfaces and maintainable application architectures.
- Developed AI-assisted business tools integrating machine learning services, NLP systems, recommendation engines, and automated reporting into customer-facing applications.
- Created backend systems, REST APIs, authentication services, background jobs, and microservice architectures supporting distributed web applications.
- Built real-time collaboration tools, messaging systems, and operational dashboards using WebSocket technologies and event-driven infrastructure.
- Worked with relational and NoSQL database systems to connect frontend workflows with backend data models and business processes.
- Deployed and maintained applications on AWS and Azure using Docker, Kubernetes, monitoring tools, and CI/CD automation.
- Collaborated with teammates to investigate technical issues, break down complex requirements, and implement clean solutions focused on user and business impact.

SOFTWARE ENGINEER — WEB & BACKEND SYSTEMS

MAR 2018 – JAN 2020

Com-Plex Systems Ltd (Hybrid)

I developed full-stack applications and worked directly with senior engineers and product teams to deliver reliable software solutions for business users.

- Developed and maintained web applications using JavaScript, PHP/Laravel, Java, MySQL, HTML, CSS, and frontend technologies.
- Built responsive user interfaces, reusable components, reporting systems, and administrative dashboards supporting business operations and customer-facing services.
- Designed and integrated REST APIs, authentication systems, database-driven applications, and backend workflows connecting user interfaces to business data.
- Improved application reliability through debugging, performance optimization, refactoring, and structured maintenance of production systems.
- Worked collaboratively with senior engineers and product teams to understand requirements, solve technical problems, and deliver features within project deadlines.
- Contributed to code quality improvements and helped maintain stable software systems through testing, troubleshooting, and iterative development.

SOFTWARE DEVELOPER INTERN — WEB APPLICATIONS

SEP 2016 – JAN 2018

Lakeside Software (On-Site)

I began my career supporting web and mobile development initiatives while gaining practical experience with production software, web technologies, backend systems, and collaborative engineering workflows.

- Assisted in building and maintaining responsive web and mobile-friendly applications using JavaScript, React, HTML, and CSS.
- Supported REST API integration, authentication systems, database queries, and basic backend development workflows.
- Investigated bugs and production issues, reproduced problems, and implemented structured fixes to improve application stability.

- Worked with teammates in collaborative development environments while learning Agile/Scrum practices, software maintenance, and production engineering workflows.
- Improved cross-browser compatibility, responsive layouts, and user interface consistency across desktop and mobile applications.

TECHNICAL SKILLS

WEB APPLICATIONS: React, TypeScript, Node.js, Python, HTML, CSS, JavaScript, Next.js, Angular, Vue.js, Redux, Responsive Web Applications, User Interfaces

BACKEND SYSTEMS: Node.js, Python, Express.js, NestJS, FastAPI, Django, Java/Spring Boot, REST APIs, GraphQL, WebSocket, Authentication, Backend Systems

DATABASE SYSTEMS: Postgres, PostgreSQL, MySQL, MongoDB, Redis, Database Design, Data Models, Query Optimization

AI & AI-ASSISTED DEVELOPMENT: AI Tools, AI-Assisted Development, Large Language Models (LLM), OpenAI APIs, Machine Learning Integration, AI Automation, Conversational Interfaces

FRONTEND & UI: React, TypeScript, HTML, CSS, JavaScript, Next.js, Vue.js, Angular, Tailwind CSS, Redux, D3.js, Responsive Design, Data Visualization

DEVELOPMENT & CLOUD: Git, GitHub, Git Workflows, AWS, Azure, Google Cloud Platform (GCP), Docker, Kubernetes, Terraform, CI/CD Pipelines, GitHub Actions

TOOLS & PLATFORMS: VS Code, Figma, Postman, Jira, Agile/Scrum, Cross-Functional Collaboration

SOFT SKILLS: Impact-Driven Approach, Thoughtful Problem-Solving, Team Player, Collaboration, Communication, Learning, Growing, Helping Others, Adaptability, User-Focused Thinking, Curiosity, Tinkering, Discovery
